**FORWARD TO URL**

To print this page, right-click and select "Print."

**What it does**

The Forward to URL service lets you attach a domain name to any existing Web site, even "free host" sites. Traffic that arrives at a domain name is automatically forwarded through our computers to a URL (Web address) specified by you.

*Example URL:* <http://www.gonamesecure.com/~myname/index.html>

**How to use it**

1. Log into to My Account and click **Modify/Update** for the domain name.
2. Click the **Web Settings** tab.
3. Click the **Modify** link next to Forward to URL.
4. Type a forwarding address in the URL field. Remember to include an "http://" in the address. Click a radio button to turn the URL Gripper feature on or off. Click **Submit**.
5. Review the information on the Confirm page. Click **Submit** to confirm the changes. You can also click your browser's Back button to change the information or **Cancel** to cancel the process.
6. To turn the service on, click the radio button next to Forward to URL on the Web Settings main page and then click **Submit**.

**More Help**

If you are unsure of how to get your Web site's URL, try accessing the site through a Web browser and then copying the address from the browser's address bar. Remember to include the "http://" at the beginning of the address. You can also call the service provider responsible for hosting the site to find out the URL.
